

Week 1: Tools for reproducible science I

ReproRehab POD 1, 10/2/2023

Agenda

- Metadata – what is it, things to consider, etc.
 - file format: JSON
- Git – what is it, and how much do you need to know?
 - commit changes to your repository
 - fork someone's repository
 - make a pull request

Metadata

- **Metadata describe a data set.**
- **Metadata ARE data.**
- **Metadata can be applied to anything.**
- **Reproducibility / Reusability**

Metadata

Youtube: Data Sharing and Management Snafu in 3 Short Acts

Metadata – File format standards

- Complete and open documentation
- Platform independence
- Non-proprietary (vendor/software independence)

Quantitative tabular data with extensive metadata top	
a dataset with variable labels, code labels, and defined missing values, in addition to the matrix of data	
Preferred Formats	Other Acceptable Formats
<ul style="list-style-type: none">• Character delimited text (ASCII or Unicode preferred):<ul style="list-style-type: none">◦ Comma Separated Values (*.csv)◦ Delimited Text (*.txt)• SQL Data Definition Language• Structured text or mark-up file containing metadata information, e.g. DDI XML or JSON	

JSON

- JavaScript **O**bject **N**otation
- Syntax rules:

1. Data is in *name : value* pairs

2. Data is separated by commas

3. Curly braces hold objects

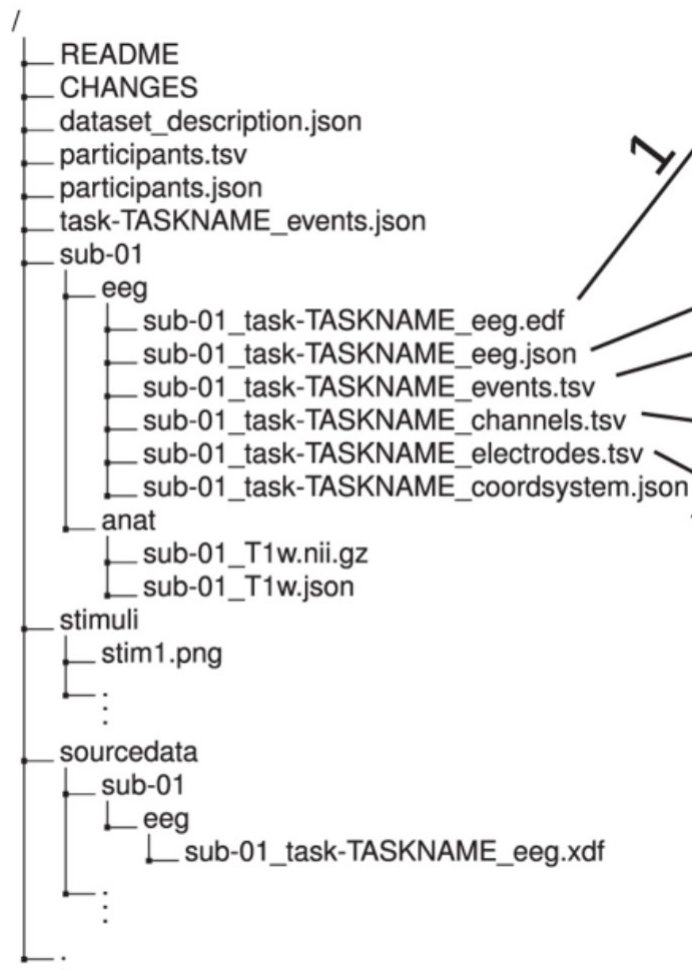

4. Square braces hold arrays

Ex. "Subject_Number" : 1 or "PID" :
"C001"

Ex. {"PID" : "C001", "age" : 34}

Ex. "Control" : [
{"PID" : "C001", "age" : 34},
{"PID" : "C002", "age" : 28}
]

JSON: example

sub-01_task-TASKNAME_eeg.json

```
{
  "TaskName": "TASKNAME",
  "SamplingFrequency": 1000,
  "SoftwareFilters": "n/a",
  "EEGChannelCount": 4,
  "EOGChannelCount": 1,
  "EEGReference": "placed on Cz",
  "PowerLineFrequency": 50
}
```

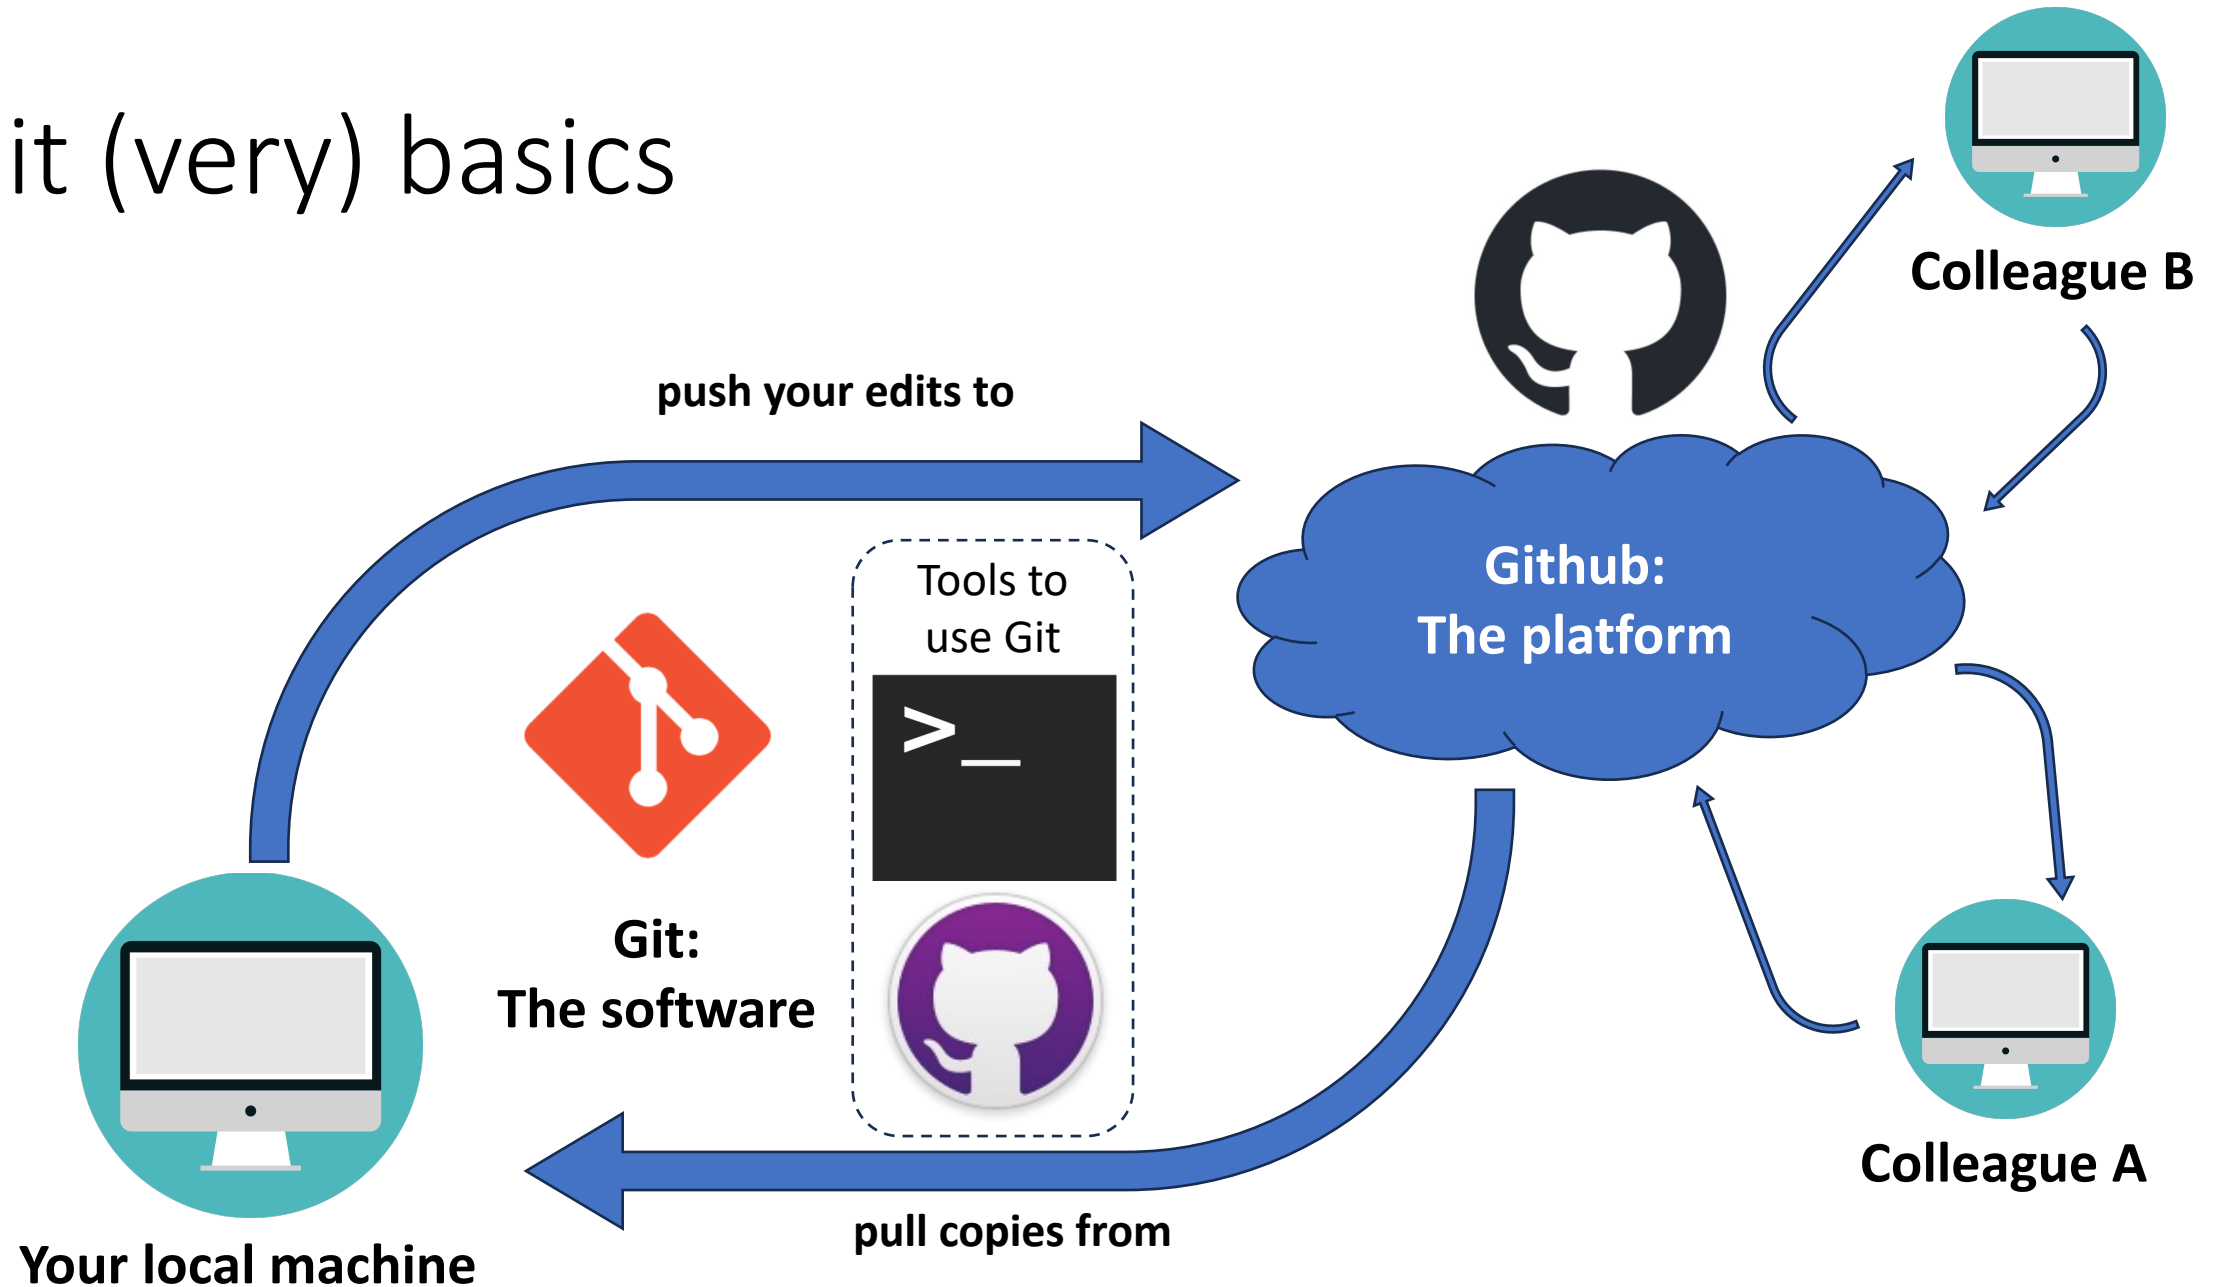

sub-01_task-TASKNAME_coordsystem.json

```
{
  "EEGCoordinateSystem": "T1w",
  "EEGCoordinateUnits": "mm",
  "AnatomicalLandmarkCoordinates": {
    "LPA": [-0.067, 1.736e-09, -3.844e-09],
    "NAS": [-4.11e-09, 0.091, -4.541e-10],
    "RPA": [0.064, -6.435e-09, -4.566e-09]
  },
  "AnatomicalLandmarkCoordinateSystem": "T1w",
  "AnatomicalLandmarkCoordinateUnits": "mm",
  "IntendedFor": "sub-01_T1w.nii.gz"
}
```

Git

Git (very) basics

Git

- Why should a scientist learn how to use Git/Github?
 1. Version control: every change you've ever made to your code or document will be saved, and you can always 'roll back'
 2. Reproducibility: you can let someone who wants to use your code to copy your repository and move ahead!

Activity

- We will try out a very basic feature of Git/Github and edit a JSON file.
